Safari Tour 'Grants': 7-Day Tarangire, Lake Natron & Ngorongoro Crater

Duration: 7 Days / 6 Nights

Type: Private Safari

Main Focus: Safari

Country: Tanzania

A unique option for adventure-seekers, this program includes tours of Tarangire and Ngorongoro Parks, as well as Lake Natron - a perfect option for travelers who want to visit the most diverse national parks in a short time. The landscape, flora and fauna of these places are very different from each other, so this tour will allow you to fully see the diversity of the African nature in just five days. Tarangire will introduce you to the wild Tarangire river, Ngorongoro will show you the most animals and the great savannahs, and then you will drive along the Great Rift Valley to reach the alkaline waters of Lake Natron and visit the active stratovolcano, Ol Doinyo Lengai.

Safari Tour 'Grants': 7-Day Tarangire, Lake Natron & Ngorongoro Crater — Tanzania safari with Serengeti Nexus

Two days in Tarangire, two at Lake Natron, then Ngorongoro Crater — matching the published Serengeti Nexus Grants route. Private 4×4 Land Cruiser, experienced English-speaking guide, and hand-picked lodges. Itinerary adapts slightly to season and wildlife movements — your consultant confirms nightly camps before travel.

Pricing follows published northern-circuit tiers with **USD 50 off** each per-person bracket versus common list rates — see calculator on your proposal. Serengeti Nexus operates with the same safety, park-rule and ethical-wildlife standards you expect on a world-class Tanzanian safari.

DESTINATIONS

Ngorongoro Conservation Area	Tarangire National Park	Arusha	Lake Natron

Planet Lodge Arusha

Day 2: Tarangire National Park

Today your safari will take place in Tarangire National Park. This is one of the most interesting places in Tanzania! The river of the same name flows through the park, where giraffes, zebras, antelopes and buffaloes come to drink. These animals attract predators, which is why a lot of lions live in Tarangire. You will definitely see them during your trip.

In the dry season, the Tarangire River becomes the only source of drinking water for many kilometers around. Because of this, large herds of elephants come to Tarangire, making Tarangire the home to the largest population of elephants in Northern Tanzania for most of the year (especially June - October and December - March). Elephants are not at all intimidated by visitors to the park, and they often come quite close to cars. This is completely safe - since elephants have no enemies in their natural nature they are naturally curious and unafraid.

Note: Tarangire National Park is also known for its ancient baobab trees. These massive trees are larger and older than any other park in continental Africa. The scenery, accented with these signatory trees is simply stunning.

Day 3: Tarangire National Park

Your second day in Tarangire National Park. Your Serengeti Nexus guide will show you the sections of Tarangire that you did not have time to visit yesterday. There are a lot of interesting locations with beautiful views, and even more African animals. In Tarangire, you can see rare species, some of which are not usually found even in the Serengeti, such as long-necked gerenuks and oryx.

Also in Tarangire, there are hyraxes - small funny animals that are the closest relatives of elephants, despite their very different size. It is very interesting to watch them, and they willingly let visitors come fairly close for photos only (remember: no touching wildlife!).

In addition, bird lovers will be interested in Tarangire because there are more than 550 species of birds here! We have good resolution binoculars in our car so you can see them even better.

Day 4: Lake Natron

This day will take place at Lake Natron, a very beautiful and remote place. Often featured in wildlife magazines, Natron is the only place in the world that has red-hued water. The color is attributed to a high content of special bacteria, which have a blood-red color. However, it can only be seen and photographed from a bird's-eye view. Lake Natron has very beautiful African landscapes and wild animals: ostriches, antelopes, zebras, giraffes also live here, but due to its remote nature, there are not many tourists. This is a great place to start or end your safari through Tanzania's northern parks.

It can be quite hot during the day. To freshen up, you can swim in the springs nearby. Water flows into them directly from the slopes of the Ngorongoro Reserve. It is very pure and well-saturated with sulfur. Some scientists believe it is beneficial for the development of bones in the body. We're not sure about that, but it's definitely not harmful.

Note: Several authentic African tribes live around the lake, including the famous Maasai. You may visit their settlements and see their way of life. (Please note that visiting the Maasai village involves an additional fee.)

Day 5: Lake Natron

Very beautiful birds live on Lake Natron including large and small flamingos, which can have numbers of tens of thousands at a time! The brilliant pink birds taking flight is a very beautiful sight. Flamingos are very fond of Lake Natron, because here they are guaranteed not to be disturbed by predators because of the water's high alkaline level. Every year from September through to April, more than three-quarters of all Lesser Flamingos in the world are born on Lake Natron. Eggs are laid in the shallow mud of the waters, and new chicks hatch along the shore. Through binoculars, you can watch very small chicks that are just taking their first steps. They are still gray in color, but very soon their plumage will begin to turn pink.

In addition to flamingos, pelicans and other birds are found in the vicinity of Lake Natron. In the wild, they behave completely differently from the zoo - the birds are very active and playful.

Day 6: Ngorongoro Conservation Area

Today you are going to the Legendary Ngorongoro Crater! Your day will begin early in the morning, when your guide arrives to drive you to the Ngorongoro Crater, part of the Ngorongoro Conservation Area. The Crater is somewhat reminiscent of The Lost World by Sir Arthur Conan Doyle: here you will witness tens of thousands of wild animals living in the massive crater left by a huge ancient volcano. The actual crater is relatively small, when you consider that it is home to the most variety of animals per square meter than anywhere else in the world! Here, you are sure to see a great number of animals within close proximity to one another.

The descent into the crater will take about half an hour of driving. The road passes through beautiful, lush forests with great scenery. Your safari guide will make a stop to see the 'look out' which is a place offering a stunning panoramic view of the entire crater. Contrary to popular myth, animals can go outside the caldera. However, most of them are safe and comfortable inside the caldera which provides an unlimited supply of fresh grass for grazers and easy prey for predators. Therefore, they prefer to remain in the crater t all the time.

Elephants, buffaloes, antelopes, lions, cheetahs, zebras and other African animals can be seen in Ngorongoro Crater. This is one of the few places in Africa where rhinos are found, although, remember that they are an endangered species, so there are very few of them. One animal that is absent are giraffes; you will not spot any of them in the crater because, due to the build of their bodies, including legs and long necks, they cannot walk down into the crater.

After your morning game drive around the crater, you will stop at the picnic area next to Lake Magadi for a snack and rest. This place is popular with various birds, including kites, who sometimes try to steal food right from the table! While not dangerous, at all, it is a good idea not to leave any food unattended. One of the draws of Lake Magadi are the hippos that live in the area. You're sure to enjoy watching them while you eat lunch. These huge animals stay close to the shore and often surface to get air. If you do see one walking out of the water, give it plenty of space. Due to the large number of animals and endemic plants, Ngorongoro Conservation Area is a UNESCO World Heritage Site and renowned for its natural significance in the world.

Note:Please do not feed animals in Ngorongoro or any other parks in Tanzania. Even if you really want to treat a small bird or monkey, you should not do this - you will only harm them. Human food disrupts the natural diet of animals and can lead to their early death! Remember, this is not just our request. This is a law which is enforced by park rangers. Any person caught feeding wildlife or violating other park rules may be fined.
